about me

I am a passionate technologist with almost two decades of experience spanning full-stack software engineering, cloud infrastructure, DevOps, systems engineering, and technical leadership. Though I have grown into strategic leadership roles, my greatest strength lies in the ability to design, build, and improve systems end-to-end with a ground-up understanding of how everything interconnects.

technical skills

REST API

Android CI/CD

Node.js Python

AWS Bash JavaScript

Django PHP

Networking

Kubernetes **linux**

pandas

Haxe git

MongoDB MySQL

Laravel

Vue.js TypeScript

ReactJS NAS

Virtualization iOS

PostgreSQL

Redis **Docker**

RabbitMQ

work experience

Chief Information Officer

Sproutly, LLC | Tennessee, USA | Jan. 2024 - present

- + Partnered with the executive team to define business strategies, ensuring technology investments and infrastructure directly supported company objectives
- + Led the end-to-end GDPR compliance program for our international web application, authoring foundational privacy policies and establishing a continuous compliance posture
- + Acted as the primary technical implementer for compliance initiatives, leveraging SysOps/DevOps expertise to rearchitect cloud infrastructure, enforce strict access controls, and align system configurations with regulatory requirements

Software Engineer

Sproutly, LLC | Tennessee, USA | Mar. 2021 - present

- + Served as a core technical contributor for a multi-tenant health tracking platform, working alongside project management and a broader engineering team. Developed the primary API server using a containerized Laravel, PHP, and Node.js stack, and helped integrate the backend with iOS/Android mobile apps and administrative web portals to facilitate secure data pipelines to Aurora MySQL and MongoDB Atlas
- + Designed and updated the client's AWS cloud infrastructure, leveraging EKS on Fargate to orchestrate scalable, high-availability containerized workloads behind Application Load Balancers. Built and maintained automated CI/CD pipelines utilizing Bitbucket to standardize multi-stage Docker builds, automated testing, and zero-downtime deployments across staging and production environments
- + Overhauled the platform's security architecture, access controls, and data protection strategies to successfully achieve and maintain strict HIPAA and SOC 2 compliance. Enforced robust network perimeters and secure administrative access by deploying AWS WAF, isolated VPC subnets, continuous vulnerability scanning via AWS Inspector, and IAM-gated bastion host utilizing AWS SSM Session Manager
- + Managed and monitored the production ecosystem, deploying New Relic and Fluent Bit within the container runtime to capture deep telemetry, centralized logs, and performance metrics. Authored comprehensive operational playbooks for disaster recovery and incident response, enabling the efficient troubleshooting of Kubernetes workloads and isolated n8n workflow automation services

French

Full Stack Engineer

HessJet, LLC | Tennessee, USA | Aug. 2017 - Mar. 2020

- + Architected and developed a backend service based on Python and Django that would manage bookings requests and trip planning for private chartered flights in an entrepreneurial venture setting running in AWS and Docker
- + Analyzed weather data from NOAA sources with Python and pandas to compile a worldwide winds aloft speed and direction averages based on a 10-year period at various flight levels
- + Developed an aircraft flight simulator that uses aircraft manufacturers' performance data and average winds to calculate accurate fuel burn and travel time to help decide which altitude to fly at in order to reduce trip costs
- + Developed a flight path finding and planning system to create a flight plan to accommodate necessary refueling stops
- + Developed a Vue.js/VueX web form to capture Fixed Based Operator (FBO) fees and prices that would be used for price calculations and airport search filtering during flight planning. The API for the web form was developed with Django REST Framework
- + Developed flight booking form with ReactJS and Node.js

Chief Information Officer

Fondation Vie et Sante | Lubumbashi, D.R. of Congo | Sep. 2012 - Aug. 2017

- + Architected and deployed the organization's foundational IT and network infrastructure, installing and configuring enterprise routers and switches to modernize clinical operations
- + Provisioned and managed a centralized virtualization server to host critical healthcare services, including a PACS server, PBX telephony, and an OpenMRS environment
- + Deployed and administered a NAS storage solution configured for the reliable retention and rapid retrieval of DICOM medical images
- + Implemented and maintained a VoIP phone system to streamline communications across multiple offices
- + Setup Ubuntu server with SSH tunneling through the organization's gateway and firewall to link to a remote Belgium server for a tele-radiology service

Teaching Technology Manager

Southern Adventist University | Tennessee, USA | Mar. 2007 - Sep. 2012

- + Planned and managed the migration of deprecated university WebCT learning management system and teaching contents to cloud-based Moodle LMS, converting WebCT data with PHP to a compatible format for importing into Moodle
- + Developed a Django-powered web application in a cross-organizational project for teacher continuing certification resulting in an improved process flow and management
- + Developed custom web applications that integrated with WebCT and Moodle LMS to help professors achieve desired functionality

education

Southern Adventist University

ABET-Accredited | Tennessee, USA | 2003 - 2007

B.S. Computer Science [Embedded Systems concentration]
